

# Overview

To complete the Introduction to AutoAI, Data Refinery and Watson Studio Deploy (WML) Hands-on Lab, you will be using IBM Cloud Pak for Data as-a-Service (CPDaaS). Hence, the prerequisites are:

- IBM ID
- IBM Cloud Account
- CPDaaS account – provisioned services: Watson Studio, Watson Machine Learning, Cloud Object Storage.

The below guide will take you through all the steps required to get your IBM ID, IBM Cloud Account and CPDaaS subscription. The whole process should not take more than 15-20 minutes.

Please note that you will likely need to provide credit card details to verify your identity and activate your Cloud account – however, we will only be using Lite (free) plans for all the required services so you should not incur any charges.

If you already have an IBM ID and/or IBM Cloud Account, please skip to page 6, where it is explained how to set up your CPDaaS.

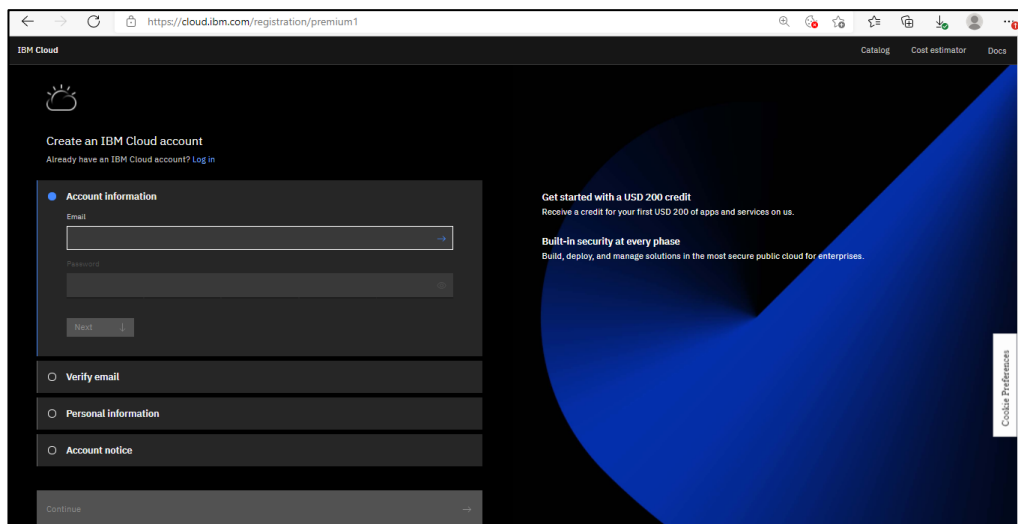

If you already have a CPDaaS subscription – please make sure you have Watson Studio and Watson Machine Learning services provisioned for the lab, in the same region.

# Getting your IBM ID and IBM Cloud Account

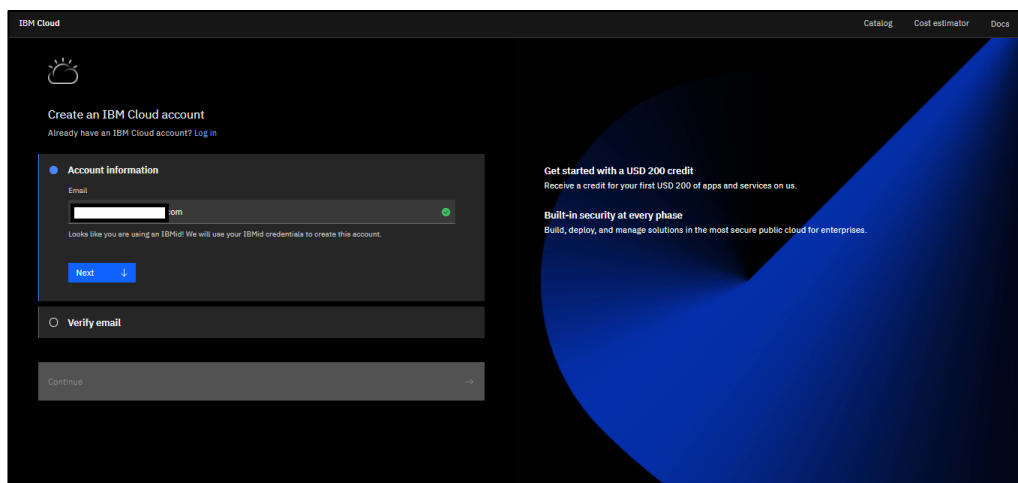

Please follow the instructions from the following page:

<https://cloud.ibm.com/docs/account?topic=account-account-getting-started>

For example, if you already have an IBM ID but not your IBM Cloud Account the process will look similar to this:

The screenshot shows the IBM Cloud registration page at <https://cloud.ibm.com/registration/premium1>. The page has a dark theme with a blue IBM Cloud logo in the top left. The main heading is "Create an IBM Cloud account" with a link "Already have an IBM Cloud account? Log in". The "Account information" section is active, showing fields for "Email" and "Password". Below these fields are radio buttons for "Verify email", "Personal information", and "Account notice". A "Next" button is visible. To the right, there is a large blue graphic and text: "Get started with a USD 200 credit" (Receive a credit for your first USD 200 of apps and services on us.) and "Built-in security at every phase" (Build, deploy, and manage solutions in the most secure public cloud for enterprises.). A "Continue" button is at the bottom left.

The screenshot shows the same IBM Cloud registration page, but the "Verify email" step is now active. The "Email" field is filled with "om" and has a green checkmark. Below the field, it says "Look like you are using an IBMid? We will use your IBMid credentials to create this account." The "Next" button is now blue. The "Continue" button is still at the bottom left. The right side of the page remains the same.

Once you set up your IBM Cloud account, please move to the next step – setting up your CPDaaS.

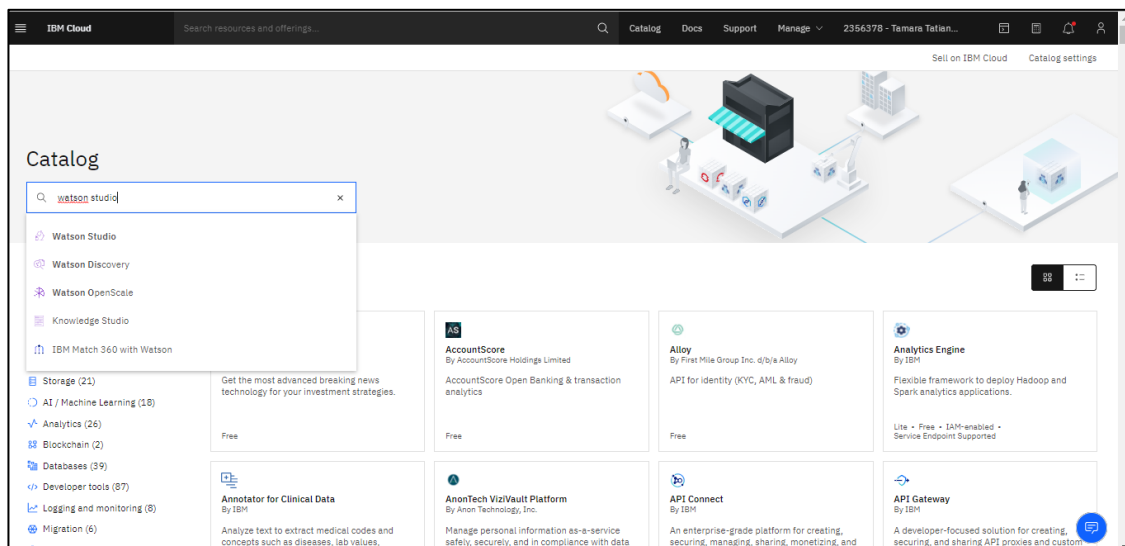

# Setting up your CPDaaS

Please log in to your IBM Cloud Account: <https://cloud.ibm.com/>

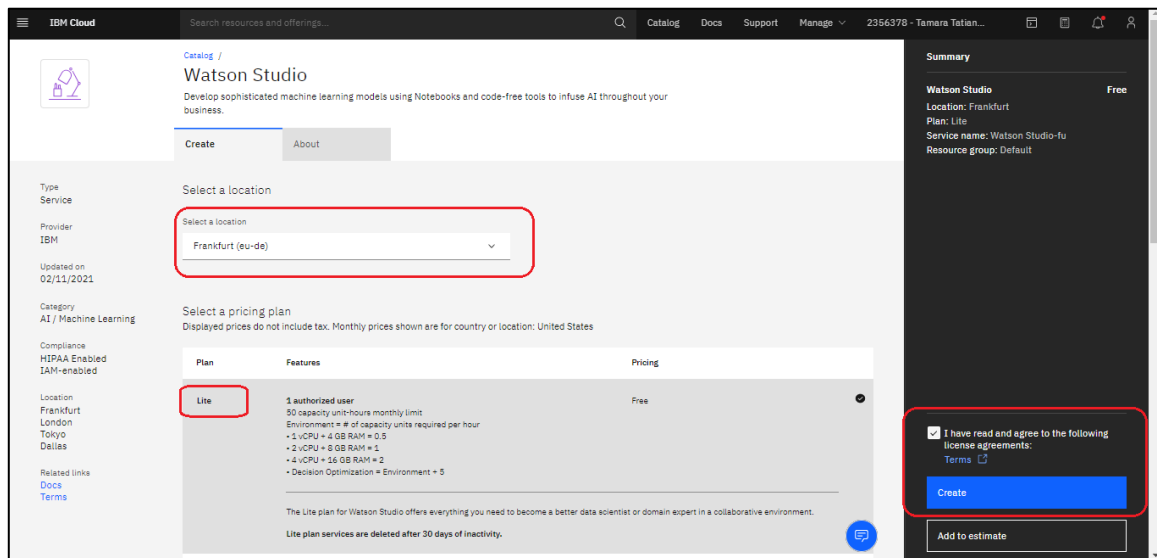

From your account Dashboard, click „Create Resource“.

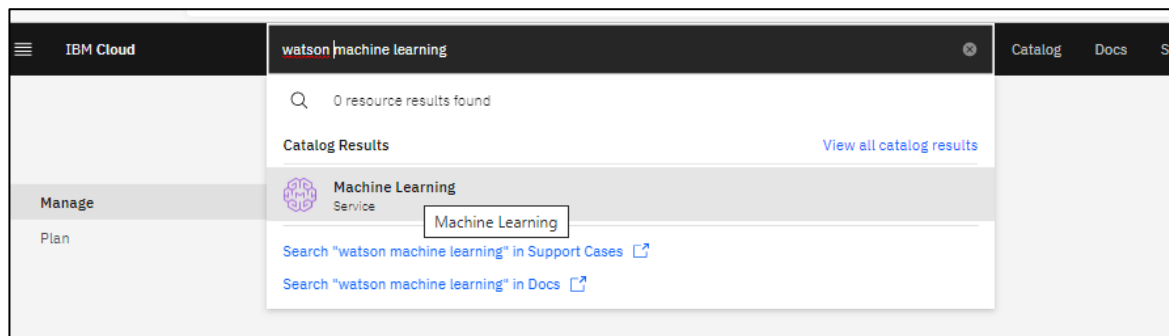

Search for „Watson Studio“.

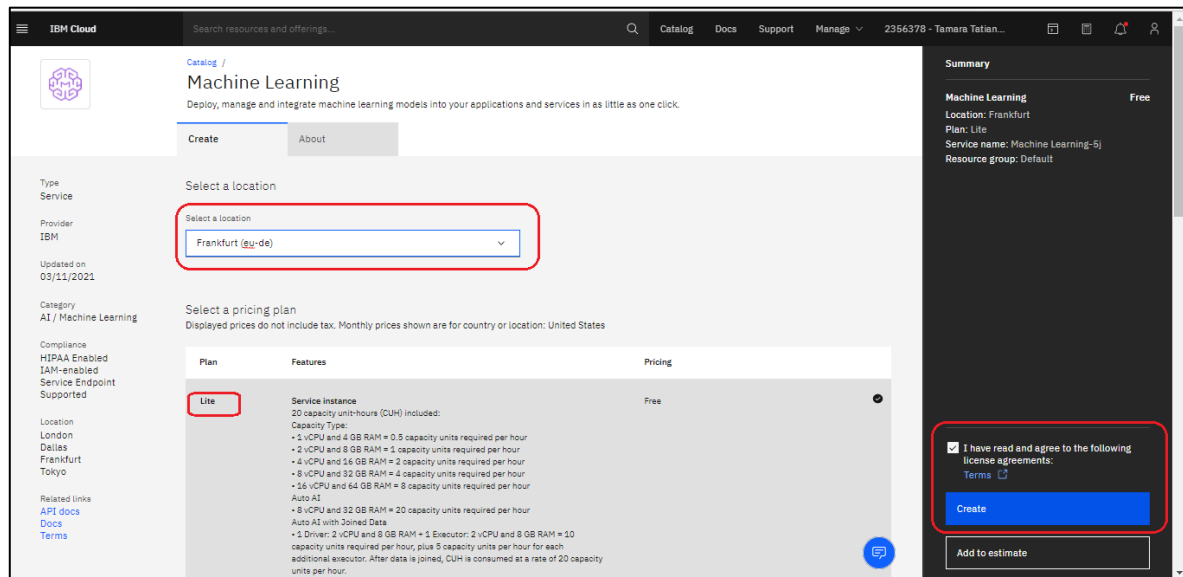

Provision (create) a Lite plan in Frankfurt (do not forget to read and accept the Terms).

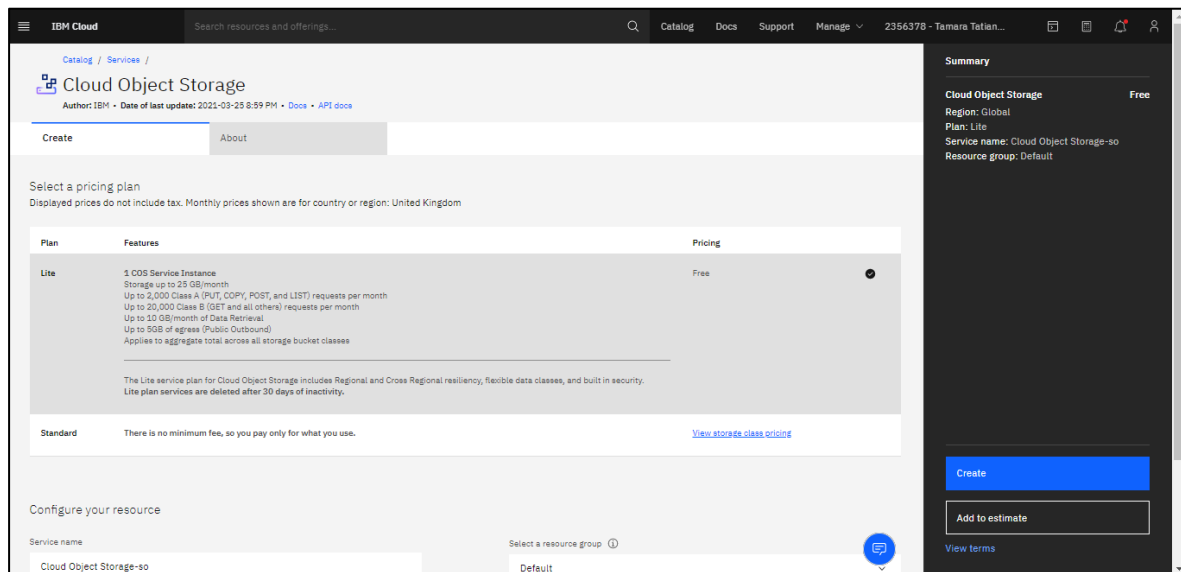

Next, search for „Watson Machine Learning“ using the search bar on top of the screen.

Provision a Lite plan in Frankfurt.

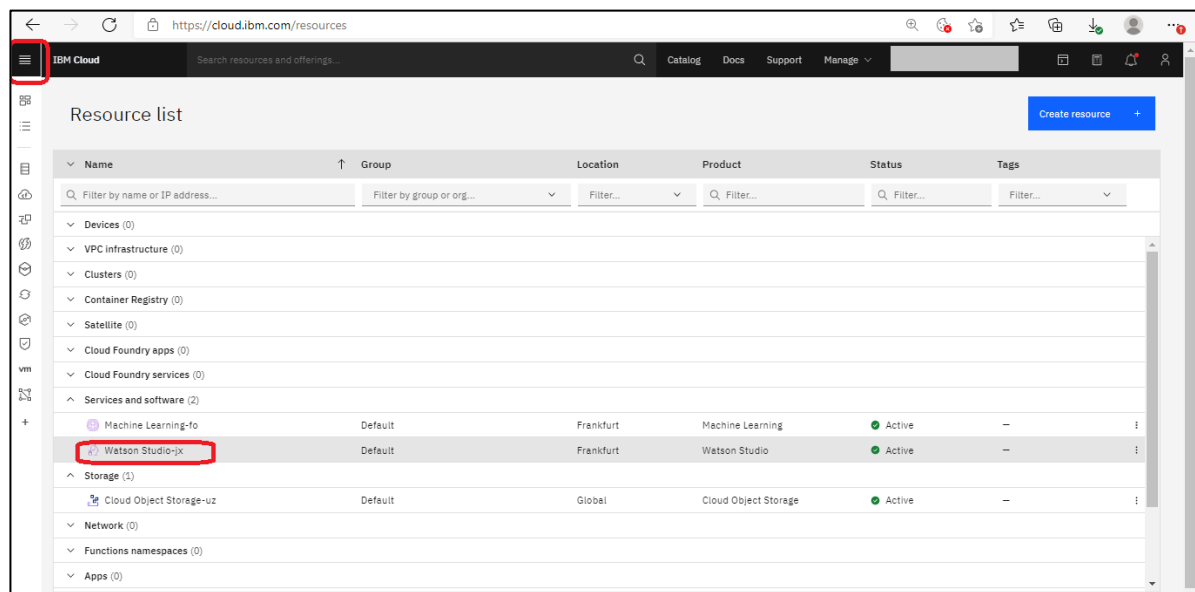

Repeat the procedure for „Cloud Object Storage“ – go with the defaults for the Lite plan.

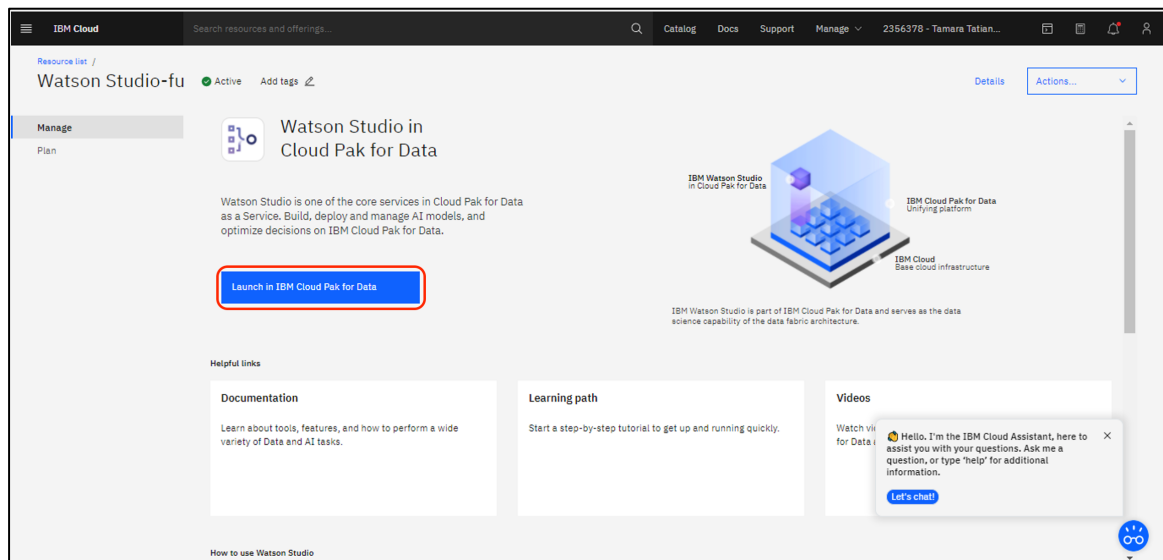

Next, click on the hamburger menu (top left of the screen) and select „Resource List“. You should be able to see all the three provisioned services, as follows.

Click on your Watson Studio service.

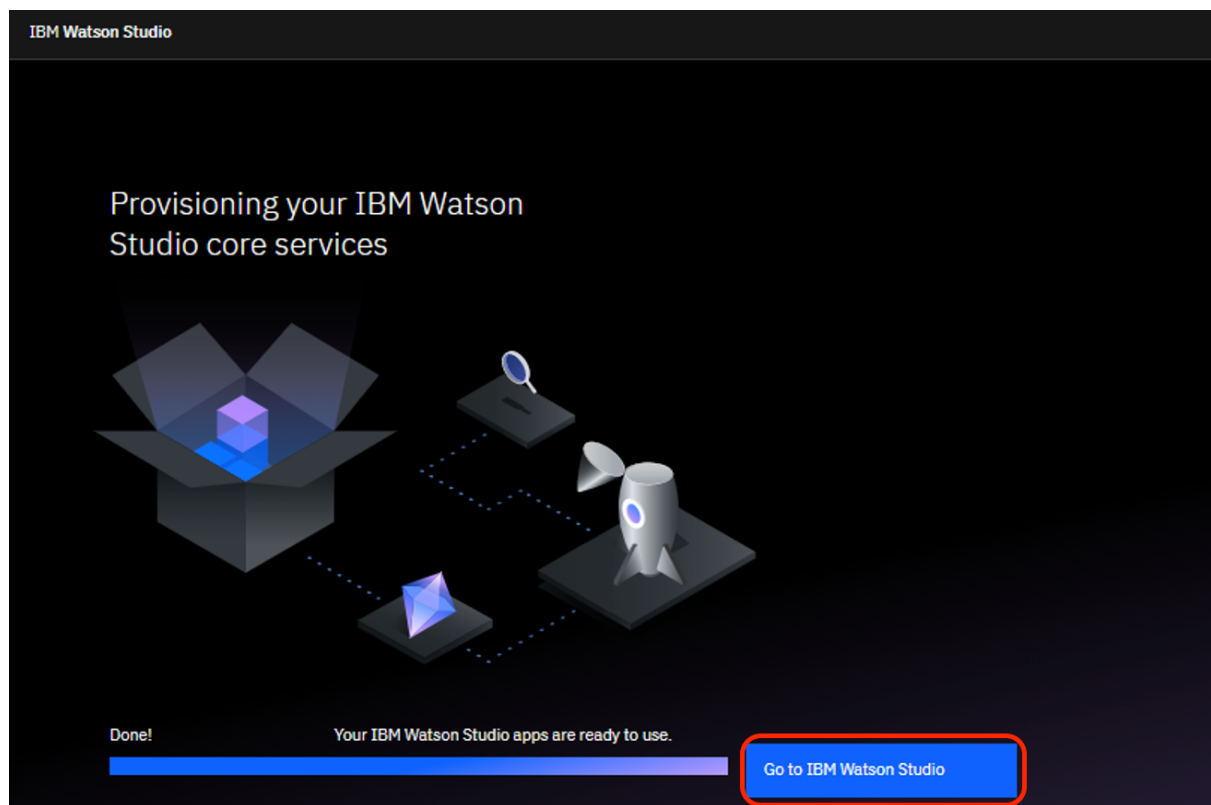

Click “Launch in Cloud Pak for Data”.

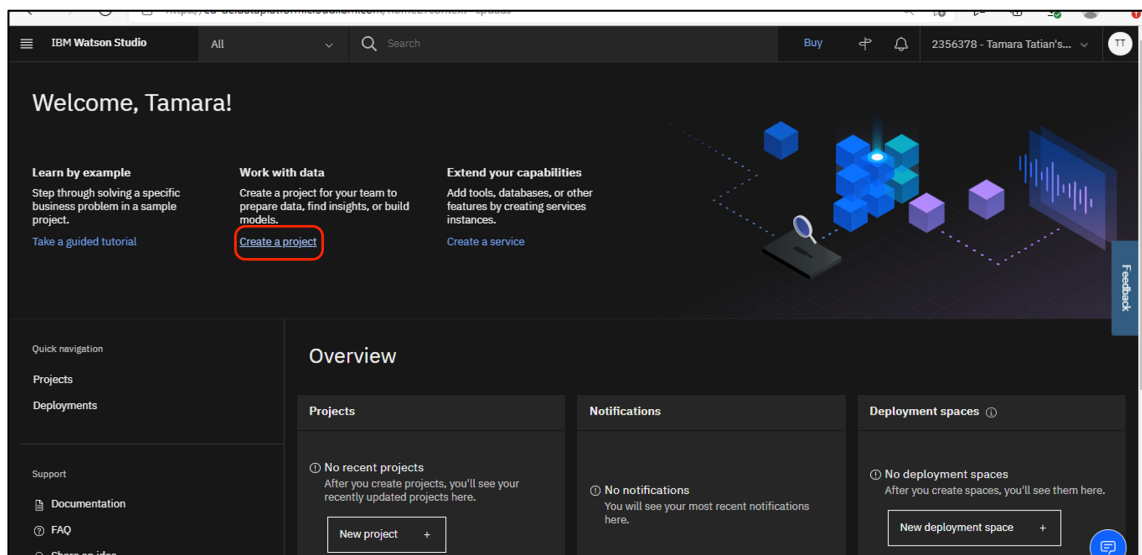

You will see this screen – once the set up completes, click „Go to Watson Studio“.

From this point onward, you will also be able to log in to your CPDaaS at this URL directly:

<https://eu-de.dataplatform.cloud.ibm.com/>

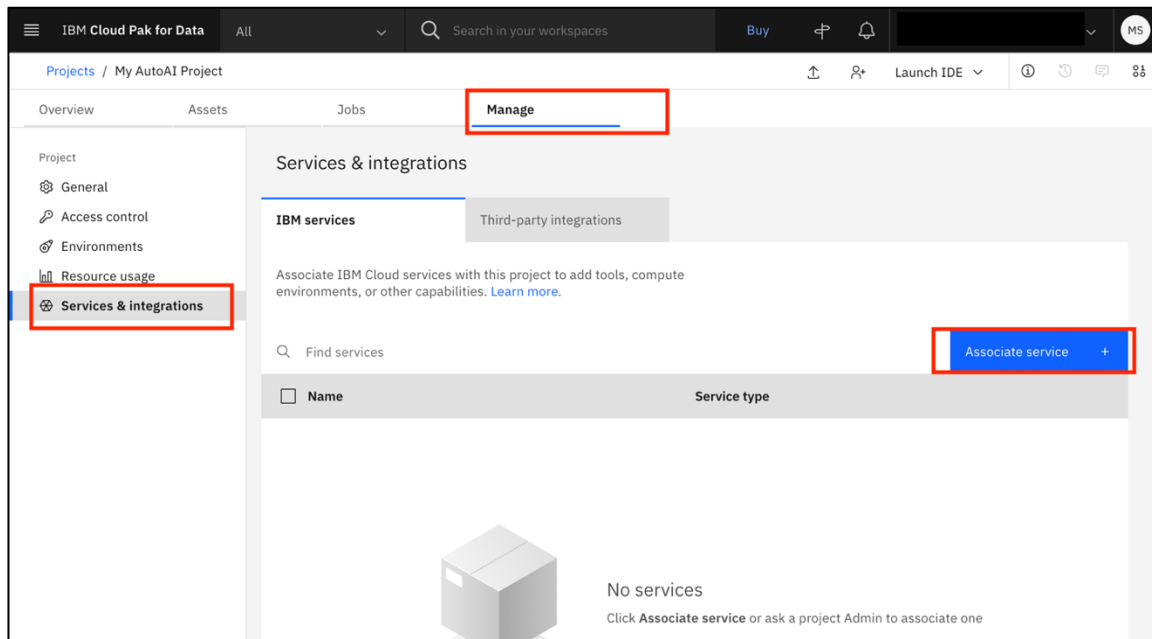

Finally, let's make sure all of our services talk to each other within our lab project. On your home page, click „Create a Project“.

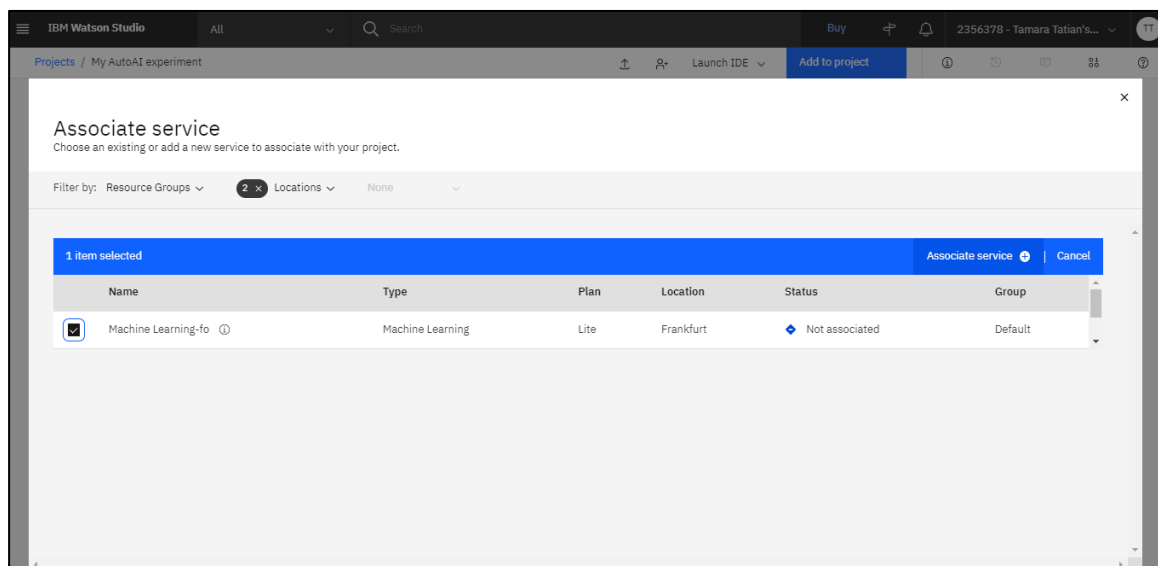

Create an empty project called “My AutoAI experiment”. Your Object storage should be picked up automatically. If you have more than one of these related to your account, please pick whichever one is most relevant.

The screenshot shows the 'New project' form in IBM Watson Studio. The form is divided into two main sections: 'Define details' and 'Storage'. In the 'Define details' section, the 'Name' field is filled with 'My AutoAI experiment'. The 'Description' field is empty. In the 'Storage' section, the 'Storage' field is filled with 'Cloud Object Storage-uz'. Below these sections, there's a 'Choose project options' section with a checkbox for 'Restrict who can be a collaborator' which is unchecked. A note states 'Project includes integration with Cloud Object Storage for storing project assets.' At the bottom right, there are 'Cancel' and 'Create' buttons.

Finally, associate your Machine Learning service with the project. Therefore, go to the „Manage“ tab and open „Services & integrations“. Click on „Associate service“.

Select and associate your Machine Learning service on the next screen.

IBM Watson Studio

Projects / My AutoAI experiment

Service Machine Learning-to successfully associated with project My AutoAI experiment.

Filter by: Resource Groups 2 x Locations None

Filter table

Name	Type	Plan	Location	Status	Group
Machine Learning-to	Machine Learning	Lite	Frankfurt	Associated	Default

New service +

That is it – you are now ready for the hands-on lab!
